

PROJECT FIRM ORDER# TYPE QTY

Dyna Accent Color™ fixtures are compact, punchy wash lights that excel in tight spaces where the need is great, yet the space is small. Available with three different RGBW emitter options and a 10° native beam angle, the output can be tailored to suit each location using optional spread lenses or snoots. Mounting options include a surface mount base, an attachment for 4" electrical boxes and even a landscape ground spike.

Supply needs are greatly simplified by the combined power and DMX control cable. Additionally, if you specify the Outdoor Link System option, each Dyna Accent Color can be connected into an OLS-equipped installation within seconds (see page 9).

As well as wired DMX control, every Dyna Accent Color fixture also benefits from built-in Aria wireless DMX capabilities to simplify installation even further. Configuration is achieved using RDM (via wired DMX) and all standard mains voltages are supported. For standalone operation, a configurable night mode uses an internal photocell and timer to respond automatically every evening as dusk approaches.

SPECIFICATIONS

| | |
|-----------------------------------|---|
| Emitters | QS (W=3000K), QW4 (W=4000K) or QW6 (W=6000K) |
| Optics | 10° native. Spread lens options: 20°, 40°, 60°, 10° x 60° or 100° x 100° |
| Output | Up to 1,092 lumens, 24,878 center candela - <i>see page 2</i> |
| Lumen maintenance | L ₇₀ 150,000 hours (@ 25° C) |
| Control | 0-100% dimming via wired DMX (with RDM configuration) or DMX via built-in Aria wireless Automated photocell activation and manual color settings available in the control menu. |
| Maximum fixtures in series | 32 via DMX (with power connections local to each fixture) |
| Operating voltage | 100-277VAC, 50/60Hz |
| Power consumption | 41W |
| Connection | Attached 5' (1.5m) hybrid IP66 cable (AWM 21388). Combined AC power and DMX/RDM Optional Outdoor Link System enables rapid power and control attachment - <i>see page 9</i> |
| Mounting | Directly compatible with ½" NPT pipe (O.D.=0.855"). Mount options also include: Ground spike, direct surface mount base, 4" round electrical box plate and extender arms |
| Effective projected area | 0.96 ft ² |
| Material | Die cast aluminum, glass top lens, optional marine coating available |
| Finish | Gray standard (RAL 7047), black (RAL 9005), white (RAL 9003) and custom colors optional |
| Ambient temperature range | -40° F to 125° F (-40° C to 51° C) |
| Ingress protection | IP66, wet location |
| Impact protection | IK07, protection against 2 joule impact (40cm distance) |
| Vibration protection | ANSI C136.31, 3G-rated for high vibration and bridge applications |
| Warranty | 5 years, limited |
| Weight | 10 lbs (4.53kg) |
| Dimensions | <i>See page 6</i> |

IMPORTANT CABLING CONSIDERATIONS

- Wherever possible, cable runs should be positioned to make them beyond normal reach within any installation.
- For long cable runs, external runs and in areas where public contact and/or accidental damage is possible, the cabling should be contained within protective conduit. Minimum spec: Schedule 40, 1.5" (ID: Ø1.61", OD: Ø1.74").
- Additional power cabling: Where power feeds require extra cabling, the power cores should be 14 AWG minimum.
- Additional DMX control cabling: For initial control runs, these are recommended:
 - Indoor exposed or inside conduit above grade: Belden 9842
 - Indoor plenum: Belden 82842
 - Outdoor exposed, direct burial, or inside conduit below grade: . . . Belden 3107DB
- Suitable alternative cables must meet all of the following requirements:
 - Construction: Shielded, twisted pair (or multi-pair).
 - Impedance: Between 90 and 120Ω.
 - Capacitance: 15pF or less.
- Please consult and adhere to all relevant local codes.

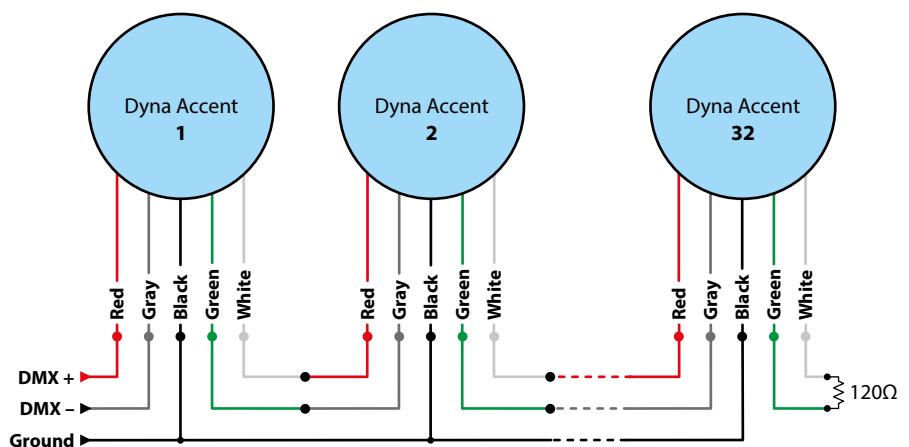

OUTDOORLINK
SYSTEM

See page 9 for details about the Acclaim Lighting **Outdoor Link System**

CONTROL

When connecting multiple fixtures, without the Outdoor Linking System options, connect the DMX control input lines to the first fixture and feed the output of that fixture to the next. The final fixture in the line should have a 120Ω terminating resistor connected between the DMX + and DMX - lines:

TIPS FOR ACHIEVING SUCCESSFUL DMX CONTROL

- Do not exceed a total cable length of 1,500 ft (457m) without buffering.
- Do not exceed a total of 32 fixtures on a single line without buffering.
- Use only connection cables with a characteristic impedance of 120Ω, preferably where the DMX + and DMX - data lines are twisted around each other and the ground link exists as a coaxial screen surrounding the inner cores.
- Connect a 120Ω terminating resistor between the DMX + and DMX - output connections of the final fixture.
- Do not introduce a passive Y-split into the control cabling. If it is necessary to split the control link in order feed fixtures located in different directions, use a powered DMX splitter/buffer.
- Ensure that the DMX + and DMX - connections do not become crossed at any point.

PROJECT _____ FIRM _____ ORDER# _____ TYPE _____ QTY _____

ACCLAIM LIGHTING OUTDOOR LINK SYSTEM (OLS)

The Outdoor Link System (OLS) from Acclaim Lighting greatly simplifies the task of distributing power and control to multiple fixtures. OLS-equipped fixtures can be added to, and removed from an installation in a fraction of the usual time.

- Robust IP67-rated hybrid connectors are used throughout, each of which combines AC power and DMX control.
- All connectors are push-to-fit and twist-to-release.
- A simple color code is used throughout: Blue collars are inputs; black collars are outputs.

Y-junction

Most useful when the next fixtures are located in the same direction from the junction.

T-junction

Most useful when the next fixtures are located in different directions from the junction.

For full installation details, please refer to the **user guide**, available for free download here:
